Internship

Full Stack Developer (Remote) **June 2025 - Jul 2025**
Dhobi G

- Developed a responsive web-based laundry management platform for customer order scheduling, tracking, and history
- Built RESTful APIs using Django, enabling secure user management, order processing, and contact form handling.
- Designed dynamic UI components with Next.js ensuring seamless cross-device performance.
- Collaborated in Agile sprints, using AI tools and version control (Git) for task efficiency and delivery.

Projects

RealTime Chess Game | *NodeJS, ReactJS, Chess.js, WebSocket, Redis Queue, Postgres* **Mar 2026**

- Developed a real-time multiplayer chess platform using **React.js**, **Tailwind CSS**, and **chess.js** for board rendering, gameplay, and move validation.
- Built an independent **HTTP authentication server** to manage secure login, authentication, and authorization.
- Developed a dedicated **WebSocket server** to create games and handle real-time communication and live move synchronization between players.
- Implemented a **Redis queue** to asynchronously process game moves and decouple real-time gameplay from database operations.
- Built a **worker server** to consume queued moves and persist them to the database for reliable storage and game recovery.

Meta Verse Platform | *NodeJS, ReactJS, WebSocket, Postgres, Prisma* **Feb 2026**

- Architected a real-time multi-user **Metaverse platform** using a modular service-based architecture, separating HTTP APIs, WebSocket server, and shared database layers for scalability and maintainability.
- Developed a secure **RESTful API** with Node.js and Express.js to handle JWT-based authentication, user management, avatar selection, and dynamic creation of virtual spaces.
- Engineered a custom **WebSocket server** to manage real-time user interactions, including movement synchronization, event broadcasting, and live presence tracking across multiple clients.
- Designed a scalable database schema using **PostgreSQL and Prisma ORM** to efficiently store user data, spatial layouts, and real-time coordinate-based positioning of entities.

AI Task Assignment System | *NodeJS, ReactJS, MongoDB, Express.JS, Gemini-API* **Sep 2025**

- Built an admin dashboard to create, manage, and track organizational tasks in real time.
- Developed an AI-based task assignment engine that analyzes task descriptions, extracts required skills and matches tasks with the most suitable employees from the database.
- Implemented skill-based matching logic using AI text analysis and database queries to improve assignment accuracy and reduce manual allocation effort
- Enabled real-time dashboard updates to reflect task assignments, employee mapping, and status changes dynamically.
- developed the frontend using React.js and Tailwind CSS, and built the backend APIs using Node.js, Express.js, and MongoDB

Certificates / Certifications

Data Structures & Algorithms **Dec 2024**
Cipher School

Cloud Computing **Jul 2024**
NPTEL

Skills

Languages: C++, JavaScript, TypeScript
Technologies/Frameworks: React JS, Node JS, Express JS, Tailwind CSS
Domain Skills: Data Structures and Algorithms, Problem-Solving, Communication

Education

Lovely Professional University **2022 – 2026**
Bachelor of Technology - Computer Science and Engineering — CGPA: 6.50 *Phagwara, Punjab*

Indian Public School **2019 – 2020**
12th — Percentage: 70.00% *Purnia, Bihar*
